

CLASEN & CO LIFTING DEVICE

THE LIFTING DEVICE EXCLUSIVELY DESIGNED FOR OUR COMPANY ENABLES TREES TO BE MOVED QUICKLY, SIMPLY AND CAREFULLY.

During loading and unloading or transportation on the construction site, the use of our lifting device protects the tree against damage and makes the work a great deal easier for both us and you .

Our lifting device holds the tree in a stable position and enables it to be moved carefully and safely on the loading hook of any vehicle. Perfectly tailored to the transportation of container trees, the device can be set up in a just few, simple steps. You can purchase the lifting device from Clasen & Co. Please contact us.

THIS IS HOW SIMPLE IT IS

1. The lifting device's hooks are driven into the containers or balls at an angle from below.
2. The transport belt is laid in a loop around the stem and then placed in the loading hook.
3. Once the device's chain has also been placed in the loading hook, the tree can be lifted and moved safely.
